

LAUNCH PAD

Titleist 913 Driver

The 16-way adjustable head gets an upgrade with a thinner, forged variable-thickness face insert designed to increase ball speed on heel and toe hits

compared to previous models. The 913's face has a thicker center piece that thins back down and away from the center resulting in maximum ball speed over a bigger area. More distance and performance is achieved through better launch conditions, the result of a neutral axis. With the center of gravity moved closer to the neutral axis, it allows the club to produce lower spin than 910 models. **\$399 • www.Titleist.com**

TaylorMade Ghost Spider S Putter

The exceptionally high moment of inertia measurement of 6,030, dramatically higher than previous TaylorMade mallets like the Ghost Manta (4,900) and Corza Ghost (3,830) makes this putter extremely stable on off-center hits, and it also makes it easier to control the head and square the face to the ball at impact. The Ghost Spider S has a multi-material head (aluminum and steel) that combines a white-colored steel-frame perimeter and top-line with a new, Tour-inspired, non-transition black crown. In addition to the standard hosel, the Ghost Spider S is also available in a "short slant" hosel designed for the player who swings on an arc.

Ping Anser Driver

Trajectory Tuning Technology allows you to hone in your launch angle and spin rate to increase distance. The body of the traditionally shaped 460cc head

is centrifugally cast into a complex, variable-thickness geometry from Ti 8-1-1, a light, low-density alloy, which yields extra weight that is redistributed to increase moment of inertia on both axes. A variable-thickness face helps generate hot ball velocity. External sole weighting positions the center of gravity low and raises the MOI, which provides a mid-high launch that adds to distance and forgiveness. The Anser's straight-bias head rotation promotes square impact.

Mizuno JPX-825 Irons

Mizuno engineers created an extremely thin and hot face utilizing MAX COR Technology for increased distance in the 4-7 irons. The 8-iron through Gap Wedge utilizes a Mid COR which delivers greater precision along with distance in the scoring irons. Harmonic Impact Technology (HIT) throughout the entire set

strategically reinforces the cavity frame to deliver a superior feel at impact. Modified U-grooves produce the ideal spin rate for maximum playability.

Cobra's AMP CELL and AMP CELL Pro Drivers

New breakthrough MyFly technology allows golfers to select from six different loft/trajectory settings (in one club) for optimized performance and distance based on a golfer's swing or weather and course conditions. The AMP CELL is offered in four colors--Silver, Directoire Blue, Barbados Red and Vibrant Orange. The AMP CELL Driver is also available in an offset model designed to help tame a slice.

Price: \$299 (AMP CELL), \$399 (AMP PRO), \$249 (AMP CELL Offset)

Tour Edge Exotics CB5 Fairway Wood

A larger, SP700 beta titanium cupped face increases distance, greater ball speed and has less spin compared to previous models. The no weld-design combo-brazes a beta-titanium cupped face with a heavier hyper steel body. The result is that every gram of excess weight is eliminated from the face and shifted to the rear skirt and sole for a deeper center of gravity. The deep, high center of gravity gives the CB5 increased distance and a penetrating launch angle.

Idea CMB Irons

The head is forged from 1025 carbon steel body that provides exceptional feel. Unique tungsten weight inserts are strategically placed low in the sole to position the center of gravity in the exact center of the scorelines. The irons have a two-piece, laser plasma-welded forged construction, and a nickel-chrome satin finish that gives them a unique and "better player" look.

Tour Edge Exotics CB5 Super-Hybrid

The CB5 super-hybrid combines a maraging steel cupped face with a hyper steel body. Adding to the design, the heavier hyper-steel body offers a lower center of gravity than previous CB's for increased forgiveness. The face's v-shaped boomerangs allow for the thinning and thickening of the material to produce longer shots on off-center hits. When combined with the smaller-than-traditional head and added face progression, the end result exceptional workability.

Datrek F-15

The sporty looking F-15 cart bag features a 15-way to with an integrated oversized putter well and soft grip handles for easy loading. The top includes an oversized soft grip putter well and two soft grip handles for carrying and loading convenience. There is ample storage room in the F-15 cart bag with 10 pockets that are all easily accessible when the bag is on the cart. .
